

PV-200
Progressive scan converter with integrated TV tuner.

Impressive features at astonishing competitive price!

The Zinwell PV-200 will process broadcast TV/Cable signals and Video signals from e.g. DVD player, VCR, Video game or Satellite receiver into a high quality VGA format according to the VESA standard. The PV-200 can be connected to any Computer, CRT or TFT Display. By using advanced progressive scan technology, with different output refresh rates and resolutions, PV-200 will always give you the highest possible picture quality. PV-200 is equipped with Zinwell's unique PAL PLUS solution. Up till now progressive scan converters suffer from motion artefacts, however PAL PLUS completely eliminates motion artefacts, offering astonishing sharp-edged and smooth moving pictures!

If needed you can loop a computer signal through the VGA and Audio inputs so you can use your display for working with your computer as well as with high definition video applications. PV-200 is a cheap alternative to LCD TV. No need to learn complicated set-up procedures, no software installation required. Just Plug and Play!

To make it really user friendly the PV-200 has an advanced channel search function and the on screen display is available in 6 different languages.
