## LANCX REMOTE CONTROL

### **Overview**

The Keene LANC remote control is designed to provide easy single button control for LANC equipped camcorders & VTR's.

### **Connection**

Simply plug the cable into the camcorder's LANC socket - no other power source is required.

### **Operation**

As you would expect with a single button device, operation is fairly straightforward!

#### **Button depressed - LED off**

In this mode the camera is in standby (sleep) mode

#### **Button up - LED on**

In this mode the camera is recording

#### **Button up - LED flashing**

In this mode the camera is on and the LANCX is attempting to initiate recording. Normally the flashing should change to constant within a few seconds. If it continues to flash permanently then an error has occurred (for example the cassette may be write-protected or at an end).

The LANCX will work in either CAMERA or VTR mode
